

PACOTAN PCR

Water soluble violet colour chrome sulphate

Properties

Appearance	:Violet coloured crystal powder
Active substance	:15+-1 Chrome oxide
pH	:3+-0,5 %10 Sol.Cationic
Basicity	:0%
Shelf Life	:24 monts in original well closed container

Characteristics

- *Very good light fastness.
- *Good filling and softness.
- *Gives tight and small grain.
- *Very light leather.
- *Open and clear wet-blue colour.
- *Very shiny an deven homogen dyeing.
- *Good pretanning chemical for loose fibre leathers.

Applications

PACOTAN PCR is a very quality and special chemical.It is used specially high quality nappa,nubuck and suede articles to be produced.For light and pastel colours it is a ideal product.It can be used also pickle-free process.It is a biodegradable in case of pickle-free process.After the deliming process the bath is adjusted $Be' = 4-4,5$ than follow the process.For light leathers it is a good retanning agent.When it is used in retanning process it must be used 1:10 of Na_2CO_3 .

In pretanning process 4-7% on the fleshed weight

In retanning process 3-6% on the shaved weight
