

# NEUTRA P-16

Specially formulated water softener Polyphosphate for soaking

## FEATURES

Property	Value
Appearance	White granule powder
Active Substance	98%
pH	9-9,5 10%Sol.
Shelf Life	24 months placed in original container.

## CHARACTERISTICS

- \*Very good solubility in water.
- \*Strong sequestrating power of calcium and magnesium salts.
- \*Good stability in alkaline pH values.
- \*Very good emulsifier of natural fatty acids

## APPLICATION

Neutra P-16 is a very helpful chemical to be used during soaking and liming process. No matter raw materials are dried or fresh salted. The quantity depends on water hardness 0,2- 0,3% will help process to solve the problems. Neutra P-16 is a special neutralising agent suitable for any chrome or vegetable tanned leather where there is lime left and a soft action is required. Neutra P-16 is very effective if used in the depikling process where uniform and deep neutralization is required. It helps dye penetration in any circumstances. In this case it shows a strong degreasing action so the skins do not need to be treated with salt solution. Quantities varying from 1-2% are usually sufficient.
