APPLICATION

RE- SYNTAN ASR is suitable every kind of Chrome or wet-white retanning process without any risk such calf-buffalo –goat or sheep leathers where excellent fullness, roundness & light grain leathers to be produced. RE-SYNTAN ASR easily combines with every kind of polymeric syntans –resins without interfering their effects. RE-SYNTAN ASR we suggest to use after Neutralising with NEUTRA KDN to bring the PH =4,6-4,8. It must be used in & short bath 20-40 % water to get better effect of complete fullness roundness of the leather produced. For dye penetration use 2% Dipers SR 2-3% with RE-SNTAN ARS in the same bath. The quantity to be used depends according to the type of article to be produced generally 8-20 % we suggest depending on the thickness of the demand article.
