

RE-SNTAN MF-X

Amino-resins based syntans

FEATURES

Property	Value
Appearance	Fine beige powder
Active Substance	98+-2
pH	7 ± 0.5
Shelf Life	18 months in original container

CHARACTERISTICS

- *Easily dispersible in water.
- *Mellow resin giving good filling on all chrome leathers.
- *Compact and full fibrous structure.
- *It improves firmness and evenness of suede nap.
- *Good product for White leathers.
- *More uniform and brilliant colours.

APPLICATION

RE-SNTAN MF can be used in the chrome retanning process to produce nappa and suede articles. Its use is possible in different working stages:

- At the end of chrome retanning process in the same bath.
- At the end of the neutralising process in the same bath.
- In the combinations with veg. tanning agent and syntans.
- At the end of the fatliquoring process.

The necessary quantity depends on the kind of leather on its thickness and on the required article. The used quantity can vary from 2% to 5% on shaved weight. If wet-blue has too-large fibrous structure such as sheepskins the addition of 2-3% RE-SNTAN MF in the tanning bath after basification, guarantees greater compactness of fibres and an excellent exhaustion of residual chrome.
