- *Very suitable buffed and nubuck articles gives very good evennes of the nappa or suede.
- *Suitable for White and pale colours it acts as a humectant to assist leather in holding moisture.

APPLICATION

FILLER F It is normally applied in the fatliouring bath 20-30 minutes before fatliour addition. Where the synthetic and vegatable tannings are used together RE-SNTAN STF can be used in the same bath assisting vegetable penetration and distribution to the leather. Generally we suggest to apply 3-4 % on the shaved weight. Gives better dye distribution of the leather without compromising the colour. The quantity we suggest 3-4 % on the shaved weight.
